**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, 20, 29-31, drawn to a crystal of Strep. Pneumoniae acyl carrier protein synthase, classified in class 530, subclass 350.
  - II. Claims 15-16, drawn to a data structure, classified in class 702, subclass 19.
  - III. Claims 17-19, drawn to methods of isolating proteins, classified in class 530, subclass 412.
  - IV. Claims 21-28, drawn to methods of crystallization, classified in class 117, subclass 84.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Group II and in Groups I, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because the data structure is simply composed of data, without any physical structure, while the crystal is composed of protein. Thus, the data differs in operation, function and effect from a protein. The methods are unrelated because they involve either purifying or crystallizing the protein, but do not use the data structures.
3. Inventions in Group I and in Groups III and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be

shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the protein can be made by purification from the Strep bacteria or by chemical synthesis of the protein on an automated synthesizer. The crystal can be made by the vapor diffusion method of Group IV or by a hanging drop method or by placing the protein crystal in space on the Shuttle.

4. Inventions in Group III and in Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because the method of isolating protein by purification from the bacteria differs in operation, function and effect from the method of crystallization by vapor diffusion.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Charles Cohen on September 2, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
